Easiest. Water Rotation. Ever.

How Do I Keep My Water Fresh?

Leveraging our patented system there is plenty of pressure to run water through your entire house. The system will pump water to all faucets throughout your home including flushing toilets, running showers, washing machines, and dishwashers. To ensure you always have fresh and clean water, we suggest every 3-4 months that our customers simply turn off the water main, and turn on their Bull Home Water Storage System and just go about their day with normal water usage. This way the water never goes stale. You just use the water in the Bull tanks until it runs out. Once your tanks are empty, simply turn the Bull System off and turn the water main back on. You now have fresh water safely stored and waiting for the next time you need it. With our patented Bull Water System, it's just a matter of flipping a couple of valves, truly the easiest water rotation ever!
